## Preface

This index was produced in accordance with the *Environmental Research Geographic Location Information Act*, Public Law 101-617, enacted by the United States Congress on November 16, 1990. Compiled by the U.S. Environmental Protection Agency, it is intended as a quick reference for locating published articles relating to environmental issues for individual geographic locations.

This publication contains an extensive but limited listing of articles from forty-seven journals and five proceedings published during 1991. It is not intended to be an exhaustive listing of all publications and articles about the environment published during that period. Inclusion of the various journals, proceedings, and articles appearing herein does not constitute endorsement by the U.S. EPA.

Individuals may use this resource to locate reference materials covering environmental issues and research relating to various geographical locations around the world. It may be useful in finding literature for such purposes as detecting trends in global or regional environmental quality, assisting the public in learning more about environmental issues in their own communities, or identifying other areas of environmental interest.

Listings contained in this publication are organized in two ways. The first half of the index lists articles according to the geographic locations of their subject matter. The second half presents the same listings organized by the individual source documents in which they appear.

This publication was compiled from numerous journals and proceedings published in 1991. As required by law, the U.S. EPA will periodically update this index to remain current.

## Acknowledgment

Staff members of the EPA library in Cincinnati, Ohio, located many of the journals included in this publication.
